

### 2025 AZBio *Fast Lane Honoree:* *Life365 Health*

## Innovating virtual care technology

**H**ome healthcare is an essential component of modern medicine, offering a wide range of medical and non-medical services delivered directly to patients in their own homes. It not only enhances patient experience and outcomes but also plays a critical role in reducing healthcare costs. Coordinated care outside of hospital settings has become a key strategy in achieving greater efficiency and lowering the overall cost of care.

Life365 Health is at the forefront of this transformation. A leading developer of virtual care technology solutions, Life365 enables scalable, home-based healthcare delivery. The company's platform addresses key challenges in care delivery by integrating solutions and managing logistics for enterprise healthcare organizations. This empowers providers, payers, and others to implement a "virtual-first" care model — remotely engaging and monitoring patients across a variety of conditions, from chronic disease management and post-discharge care to population health initiatives.

Each year, AZBio honors a select group of companies driving innovation and rapid progress—Life365 is proud to be among these Fast Lane honorees.

Led by a team of seasoned, industry-recognized leaders, Life365 holds numerous patents in wearable devices, sensors, and smart patches enhanced by machine learning and AI. The company is also a strategic partner of Microsoft Cloud for Healthcare and the U.S. Department of Veterans Affairs (VA), serving the largest veteran population in the world.

In 2023, Life365 was selected by Valor Healthcare to support the VA's eight-year contract for Remote Patient Monitoring (RPM) and Home Telehealth (HT) services. RPM and telehealth have gained significant traction since the COVID-19 pandemic, which redefined how care is delivered. Since 2003, the VA's Home Telehealth program has used remote technologies to manage chronic conditions. In 2023 alone, over 2.4 million unique veterans—approximately 40% of the VA's patient population—received virtual care.

Life365 also made two strategic acquisitions in 2023 to further enhance its connected care offerings:

PillDrill, an award-winning smart medication tracking system, was integrated into the Life365 platform to help patients and caregivers ensure

medications are taken properly—with smart reminders, tracking, and notifications.

AffirmXH, known for advanced biometric data analytics and no-code digital treatment platforms, brought powerful new capabilities to Life365. Its technologies include a biosensor, drag-and-drop treatment builder, and a disposable, maintenance-free Continuous Temperature Sensor—capable of capturing over 50 temperature readings per hour.

In 2024, Life365 participated in a landmark health study published in The Joint Commission Journal on Quality and Patient Safety. The study, titled "A Quality Improvement-based Approach to Implementing a Remote Monitoring-Based Bundle in Transitional Care Patients for Heart Failure," showcased how integrated technology, clinical services, and equity-centered design can significantly reduce hospital readmission rates for heart failure patients.

Life365 Health is accelerating innovation and delivering scalable, meaningful solutions that keep patients connected, monitored, and cared for—wherever they are. **AB**
